Leisuwash Frequency Asked Questions

1. Difference between Leisuwash 380, 370, 360, and Leisuwash SG Plus

Leisuwash company was started in year 2014, in the first 10 years, the production is mainly on Leisuwash 360 model and we've installed about 10,000 machines in worldwide markets. We collected a lot of feedback from different markets, and made a lot of improvements in machine quality, reliability, and technology.

The new Leisuwash 380 is developed according to the 10 years experience, with advanced technology and luxury appearance, stainless steel main shuttle makes the machine lifetime more than 10 years estimated, wide open bay provide customer with comfortable car parking, the core technology Bus Servo Motion Control System + AI Three-Axis Motion Control, support machine with smooth running, accurate detection, and reliable performance, on it's main shuttle has no longer sensors for recognize the rotate and moving position, the quantity of sensors on main shuttle reduced from 10pcs to 2pcs (compare with 360 model), and reduce the trouble shooting as well.

Leisuwash 370 model is developed according to 360 model machine size, in order to fit in some compact buildings, but it adopts with new generation software same as 380 model, and also received a lot of hardware features from 380 model, like the new design L arm, foam dispensers, new 3 in 1 pump system, it makes 370 model totally becomes a new generation product with leading technology in the market.

Leisuwash SG Plus has different wash technology, the contour-following wash technology focus more on wash quality than wash speedy, it suit for the market which doesn't have super busy car wash business with very long queue.

2. Installation & Training

* If there's an exclusive distributor available in your region, you need to buy from distributor and distributor will support your installation, training and after sale service.

* If a distributor can't be found in your region, we can dispatch technician to support your installation and training, but the traveling expense should on customer's account, it include visa cost, round trip air tickets, hotel with restaurant, and customer need to pay for technician's salary USD150/day. One machine installation takes about 7

days, two machines about 10 days. (we provide one technician and customer provide two technicians for assistance and studying)

* Customer is possible to install the machine by themselves, we will provide detailed installation, service, and user manuals.

3. After sale service & 24/7 Technical support

We have remote control service from China office, and could remote control customer's machines in different countries, we can help with customers like software update, parameters modification, machine reset etc.

We also have an APP for customer, and customer could manage different machines from the registered APP, both mobile phone and laptop available.

Hardware service will rely on customer or distributor, we will provide online service, the online service time period will be more than working hours, we will always stay in touch while we are not sleeping.

4. Spare part availability

Normally we ask customer keep some extra spare parts in stock for emergency service, we have a recommendation spare parts list for each model. In case customer need spare parts urgently, we can also send the parts by courier shipping, but the courier shipping cost will on customer's account.

5. Warranty

We provide 1~3 years warranty, within warranty period we will cover replacement parts free of charge, but we can not cover courier shipping from China to other countries, and we can not cover the labor service in other countries. So we recommend customer keep some extra spare parts in stock, we can ship the compensation parts with next cargo shipment, in case of emergency, we can deliver spare parts package by courier shipping, but courier shipping cost will on customer's account.

Meanwhile, warranty is not valid in any of below situation:

* Human damage or operate the machine not follow instruction or under abnormal circumstance.

* Damage due to force majeure, such as wars, floods, earthquakes, lightning, abnormal voltage.

6. Water consumption and chemical consumption

Water consumption is about 50L when machine running one circle, so total car wash consumption for one car wash is around 150~200L water, consider 2~3 wash circles per car wash.

Chemical consumption is about 20~50ml for each kind of chemical, the consumption is adjustable in chemical injection system.

7. Water recycling, water reverse osmosis, water softener

Car wash water recycling use is a very professional project, need very professional service and maintenance, the cost for recycling use the water could be more expensive than buying new water, so we don't recommend customer recycle use the car wash water. If environmental protection demand recycle car wash water, we can provide relative recycle system, different capacity at different prices.

Reverse osmosis equipment is for creating RO water (super clean water) for spot free rinse.

Water softener is necessary for customers who use under ground water supply in car wash.

We can provide relative RO equipment, Water softener, different capacity at different prices.

8. Payment terminal

We can customize payment terminal for different countries, support with multiple payment methods, like credit card, VIP card, QR code, cash, coins, banknotes, receipt printer, coin change dispenser, bill change dispenser etc, customers could also use local payment terminal connect to work with Leisuwash equipment, we will provide with technical support for the connection.

9. Become a distributor

Leisuwash marketing strategy is establish distributors at each country. (some big countries will established by regions)

* We don't have special condition for a conventional distributor without exclusive right.

* If you want to apply for exclusive dealership in your country or region, we need to make an agreement with a yearly MOQ, MOQ quantity depends on the market potential.

10. Preparation before installation

* 3 phase industry power supply, 4 air fans 22Kw, 6 air fans 33kw.

* Water supply, with a water tank. (more than 1000 liters)

* Air compressor with air volume more than 0.67m³/min, could provide stable air pressure more than 0.8Mpa.

* Floor cement thickness need to be more than 20cm, if not enough then need to make six concrete columns for mounting support frames, floor horizontal error less than 3cm.

* Scaffold 2 pcs.

* Electric Hammer 1 pc, configured 10, 14, 16 drill each one piece.

* Electric Welder 1 pc.

* Polisher 1 pc.

* Infrared Level 1 pc.

* Rough twine 10 meters.

* Hand Electric Drill 1 pc.
